# **Skills needed :**

- 1. Matlab**
- 2. Linear Algebra**
- 3. Fourier transform**
- 4. Signal Processing**

# **Direction of Arrival (DOA)**

- **Module 1 : Narrowband DOA Estimation**
- **Module 2 : Broadband DOA Estimation**
- **Module 3 : Microphone Array Experiment**
- **Module 4 : Bonus**

# **Narrowband/ Broadband DOA Estimation :**

We're going to give a four-channel data collected by the microphone array. According to the given data, determine the direction of the two sound sources.

## **Microphone Array Experiment :**

From the given document, download the corresponding software and then record two audios in different directions. Estimate these two directions using your algorithm.

## **Bonus :**

1. Build a GUI to display the direction of the sound source.
2. Real-time display of sound source direction.

Figure 1: Array configuration
